SEARCH 🔍

Search by pod name, version, author, description

INSTALL   START   CREATE

CocoaPods is distributed as a ruby gem, installing it is as easy as running the following commands in the terminal:

```
$ [sudo] gem install cocoapods
$ pod setup
```

Now that you've got CocoaPods installed it's time to **get started**.

CONTRIBUTE

We're developing CocoaPods on GitHub. There's a repository for the CocoaPods tool and one for the pods specs. It's easy and really gratifying to contribute patches or pods, you even get push access when one of your specs or patches is accepted.
